

AJIT SINGH

+91 7989788904 | sajit8595@gmail.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#) | [Portfolio](#)

Technical Skills

Programming Languages: Java, Python, TypeScript, JavaScript, SQL

Backend and Frontend: Microservices, Kafka, Redis, REST APIs, Quarkus, Angular, NgRx, RxJS

Design & Algorithms: System Design, HLD, LLD, Design Patterns, OOP, Data Structures & Algorithms

Infra: Azure Cosmos DB, Docker, Kubernetes, OpenShift

Testing & Tooling: JUnit, Jest, Vitest, Playwright, Jenkins CI/CD, Splunk, Git, Model Context Protocol (MCP)

Technical Experience

Amadeus Software Labs

Bengaluru, India

Software Development Engineer II

Apr 2026 – Present

- Built a **source-of-truth** service ingesting **500K+ requests/day** from **5 producer apps** and persisting per-message token usage to **Azure Cosmos DB** with **zero data loss**, shown as analytics on an **Angular** dashboard.
- Designed a **human-in-the-loop (HITL)** approval pipeline that queues producer tasks sequentially and fires **webhook** callbacks on dashboard approval, so AI runs only after a human approves.
- Planned the retirement of a **decade-old legacy Java** backend at **200K+ requests/day**, mapping **stored procedure** dependencies into phased **cross-functional** migration plans.
- Cut feature design and setup from **2 days to 3 hours team wide** with **AI agents and skills** that fill the team's **HLD** template (**UML**, component diagrams) from a spec and generate starter code following repo conventions.
- Sped up **team delivery** by mentoring juniors through **design reviews**, debugging, and code review standards.

Software Development Engineer I

Jul 2023 – Mar 2026

- Eliminated wallet balance mismatches across every refund path at **100K+ transactions/day** with **zero production downtime**, shipping a **C++** refund wallet integration with **cross-service consistency** and **compensating rollback**.
- Reduced backend validation calls **90%** with an **Angular** UI where accredited travel agents define per-airline, per-date commission and limit rules for sub-agent groups, validated client-side before submission (**NgRx**, **RxJS**).
- Cut **API latency 50% (2s to 1s)** by reducing the **time complexity** of the business logic that applies admin-configured commission and limit rules when sub-agents issue tickets, in **Java REST APIs** at **50K+ booking transactions/day**.
- Cut manual regression **80%** and sustained **95%+** coverage with a reusable, automated **backend component testing** framework on **Playwright** and **Jenkins CI/CD**.
- Triaged and fixed **50+ AppSec** findings within SLA, sustaining **zero open vulnerabilities** across **4 services**.

Projects

Legacy Code Ownership Platform | Python, Angular, MCP, Copilot, Splunk, Bitbucket API

Mar 2026

- Reduced ownership investigation from **1 week to 3 days** with two chained **MCP** tools correlating **Splunk** telemetry and **Bitbucket API** references across **1,800+ stored procedures**, **110 repos**, and **20+ owners**.
- Built an **Angular** dashboard with searchable, filterable, multi-sortable views over ownership, code usage, and decommissioning priorities; adopted across multiple engineering teams.

Low code / No code | Angular, Typescript, Bootstrap — Amadeus SDE Intern

Feb 2023 – Jun 2023

- Built **Angular** components with pre-validated rule generation to simplify user workflows.
- Replaced a legacy quality monitoring code editor with a **no-code** rule editor, cutting the code needed per rule change.

Education

MLR Institute of Technology, Hyderabad, India

Jul 2019 – Apr 2023

Bachelor of Technology, Electronics & Communications Engineering

CGPA: 8.46

Awards & Certifications

- **Competitive Programming:** [LeetCode Knight \(1887\)](#) | [CodeChef 4* \(1888\)](#) | [Google Kick Start \(Rank 1817\)](#)
- **Game Changer Award** (Jan 2026): Pivoted from Java to deadline-critical C++, securing the customer pilot.
- **Pace Setter Award** (Aug 2025): Consistent sprint delivery, proactive ownership, and minimal release spillover.
- **Google Cloud Skill Badges** (2026): [Manage](#) and [Deploy](#) Kubernetes Applications on Google Cloud.
